

FSBH0F70A, FSBH0170/A, FSBH0270/A, FSBH0370 Green Mode Fairchild Power Switch (FPS™)

Features

- Brownout Protection with Hysteresis
- Built-In 5ms Soft-Start Function
- Internal Avalanche Rugged 700V SenseFET
- No Acoustic Noise During Light-Load Operation
- High-Voltage Startup
- Linearly Decreasing PWM Frequency to 18KHz
- Peak-Current-Mode Control
- Cycle-By-Cycle Current Limiting
- Leading-Edge Blanking (LEB)
- Synchronized Slope Compensation
- Internal Open-Loop Protection
- V_{DD} Under-Voltage Lockout (UVLO)
- V_{DD} Over-Voltage Protection (OVP)
- Internal Auto Restart Circuit (OVP, OTP)
- Constant Power Limit (Full AC Input Range)
- Internal OTP Sensor with Hysteresis
- VIN Pin for Pull-High Latch function and Pull-Low Auto Recovery Protection

Applications

General-purpose switch-mode power supplies and flyback power converters, including:

- Auxiliary Power Supply for PC and Server
- SMPS for VCR, SVR, STB, DVD & DVCD Player, Printer, Facsimile, & Scanner
- Adapter for Camcorder

Description

The highly integrated FSBH series consists of an integrated current-mode Pulse Width Modulator (PWM) and an avalanche-rugged 700V SenseFET. It is specifically designed for high-performance off-line Switch Mode Power Supplies (SMPS) with minimal external components.

The integrated PWM controller features include a proprietary green-mode function that provides off-time modulation to linearly decrease the switching frequency at light-load conditions to minimize standby power consumption. To avoid acoustic-noise problems, the minimum PWM frequency is set above 18kHz. This green-mode function enables the power supply to meet international power conservation requirements. The PWM controller is manufactured using the BiCMOS process to further reduce power consumption. The FSBH series turns off some internal circuit to improve power saving when V_{FB} is lower than 1.6V, which allows an operating current of only 2.5mA.

The FSBH series has built-in synchronized slope compensation to achieve stable peak-current-mode control. The proprietary external line compensation ensures constant output power limit over a wide AC input voltage range, from 90V_{AC} to 264V_{AC}.

The FSBH series provides many protection functions. In addition to cycle-by-cycle current limiting, the internal open-loop protection circuit ensures safety when an open-loop or output short occurs. PWM output is disabled until V_{DD} drops below the V_{TH-OLP}, then the controller starts again. As long as V_{DD} exceeds 28V, the internal OVP circuit is triggered.

Compared with a discrete MOSFET and controller or RCC switching converter solution, the FSBH series reduces total component count, design size, and weight; while increasing efficiency, productivity, and system reliability. These devices provide a basic platform well suited for design of cost-effective flyback converters, such as in PC auxiliary power supplies.

Ordering Information

Part Number	Sense FET	Operating Temperature Range	VIN Pin	Eco Status	Package	Packing Method			
FSBH0F70ANY	0.5A 700V	-40°C to +105°C	Disable	Green	8-Pin Dual In-Line Package (DIP)	Tube			
FSBH0170ANY	1.0A 700V	-40°C to +105°C							
FSBH0270ANY	2.0A 700V	-40°C to +105°C							
FSBH0170NY	1.0A 700V	-40°C to +105°C	Enable						
FSBH0270NY	2.0A 700V	-40°C to +105°C							
FSBH0370NY	3.0A 700V	-40°C to +105°C

Application Diagram

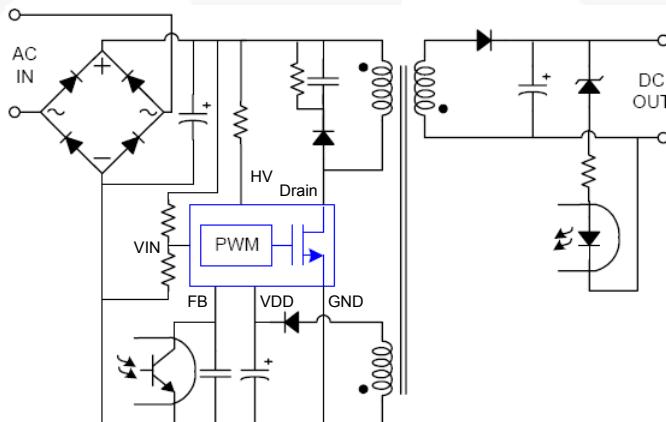

Figure 1. Typical Flyback Application

Output Power Table⁽¹⁾

Product	230V _{AC} ± 15% ⁽²⁾		85-265V _{AC}	
	Adapter ⁽³⁾	Open Frame ⁽⁴⁾	Adapter ⁽³⁾	Open Frame ⁽⁴⁾
FSBH0F70A	7W	10W	6W	8W
FSBH0170/A	10W	15W	9W	13W
FSBH0270/A	14W	20W	11W	16W
FSBH0370	17.5W	25W	13W	19W

Notes:

1. The maximum output power can be limited by junction temperature.
2. 230V_{AC} or 100/115V_{AC} with doublers.
3. Typical continuous power in a non-ventilated enclosed adapter with sufficient drain pattern as a heat sink, at 50°C ambient.
4. Maximum practical continuous power in an open-frame design with sufficient drain pattern as a heat sink, at 50°C ambient.

Internal Block Diagram

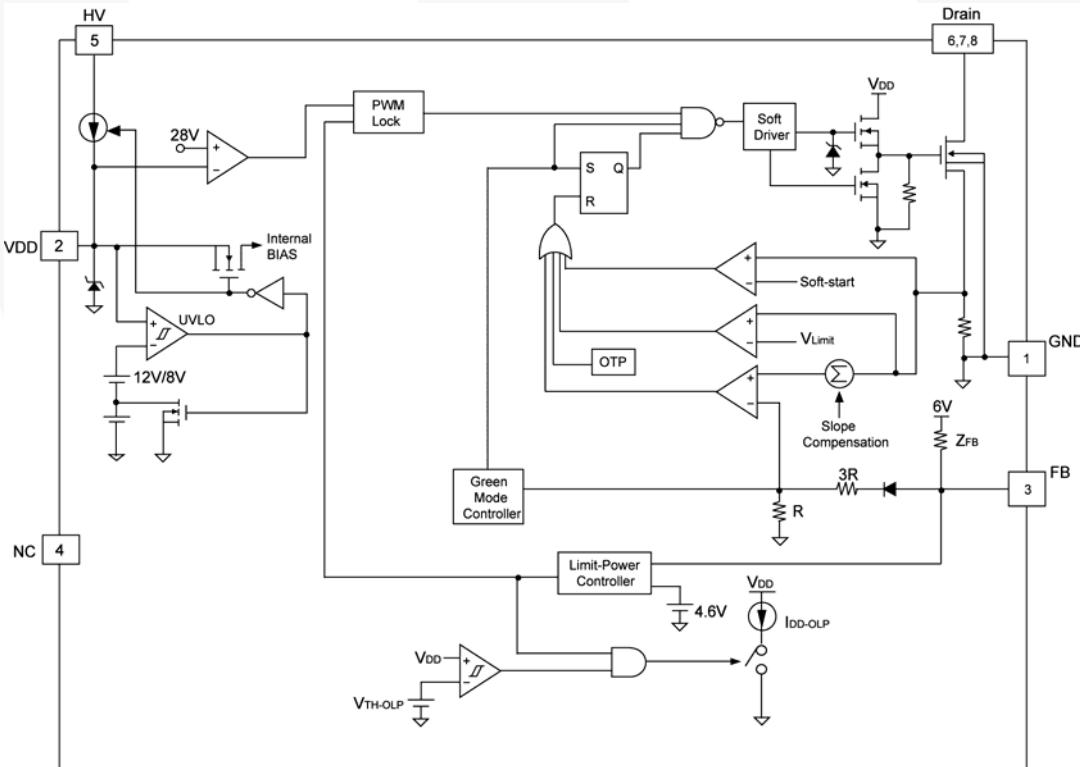

Figure 3. FSBH0F70A, FSBH0170A, FSBH0270A Internal Block Diagram

Pin Configuration

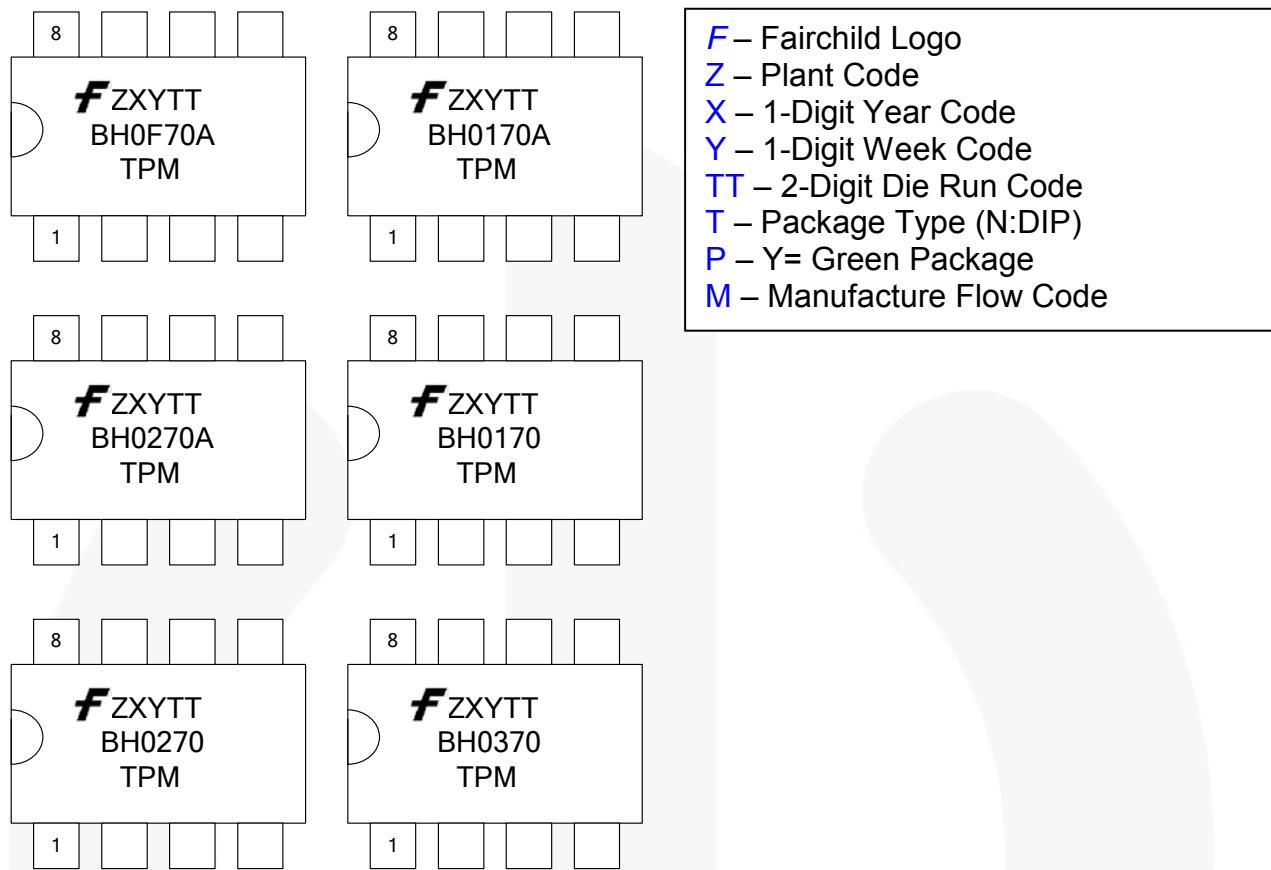

Figure 4. Pin Configuration

Pin Definitions

Pin #	Name	Description
1	GND	Ground. SenseFET source terminal on primary side and internal controller ground.
2	VDD	Power Supply. The internal protection circuit disables PWM output as long as V _{DD} exceeds the OVP trigger point.
3	FB	Feedback. The signal from the external compensation circuit is fed into this pin. The PWM duty cycle is determined in response to the signal on this pin and the internal current-sense signal.
4	VIN	Line-Voltage Detection. The line-voltage detection is used for brownout protection with hysteresis and constant output power limit over a universal AC input range. This pin has additional protections that pull HIGH for latch and pull LOW for auto recovery, which depends on the application.
	NC	NC Pin for FSBH0F70A, FSBH0170A, and FSBH0270A.
5	HV	Startup. For startup, this pin is pulled HIGH to the line input or bulk capacitor via resistors.
6, 7, 8	Drain	SenseFET Drain. High-voltage power SenseFET drain connection.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter		Min.	Max.	Unit

Notes:

5. All voltage values, except differential voltages, are given with respect to the network ground terminal.
6. Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device.
7. Non-repetitive rating: Pulsewidth is limited by maximum junction temperature.
8. L=51mH, starting T_J=25°C.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Functional Description

Startup Current

For startup, the HV pin is connected to the line input or bulk capacitor through the external resistor R_{HV} . Typical startup current drawn from HV pin is 3.5mA and it charges the V_{DD} capacitor through the resistor R_{HV} . The startup current turns off when the V_{DD} capacitor voltage reaches to V_{DD-ON} . The V_{DD} capacitor then maintains the V_{DD} before the auxiliary winding of the transformer provides the operating current.

Slope Compensation

The FSBH series is designed for flyback power converters. The peak-current-mode control is used to optimize system performance. Slope compensation is added to stabilize the current loop. The FSBH series inserts a synchronized, positively sloped ramp at each switching cycle.

Soft-Start

The FSBH series has internal soft-start circuit that slowly increases the sense-FET current after startup. The typical soft-start time is 5ms during which the V_{Limit} level is increased six steps to smoothly establish the required output voltage, as shown in Figure 28. This also helps prevent transformer saturation and reduces the stress on the secondary diode during startup.

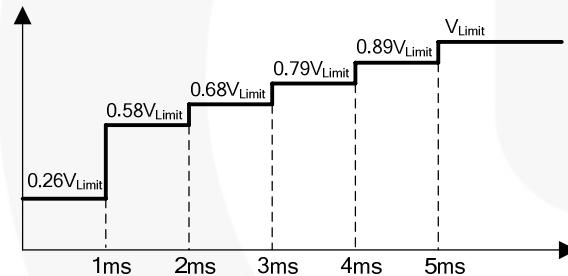

Figure 26. Soft-Start Function

Brown In/Out Function

Figure 27 shows a resistive divider with low-pass filtering for line-voltage detection on the VIN pin. The VIN voltage is used for the brownout protection, when the VIN voltage drops below 0.6V and debounce is 500ms. With a hysteresis voltage, the FSBH0170/0270/0370 turns on when VIN reaches 1.1V.

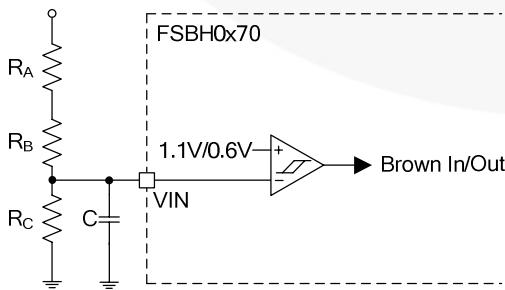

Figure 27. Brown In/Out Function on VIN Pin

Constant Power Control

To limit the output power of the converter constantly, high/low line compensation is included. Sensing the converter input voltage through the VIN pin, the high/low line compensation function generates a relative peak-current-limit threshold voltage for constant power control, as shown in Figure 28.

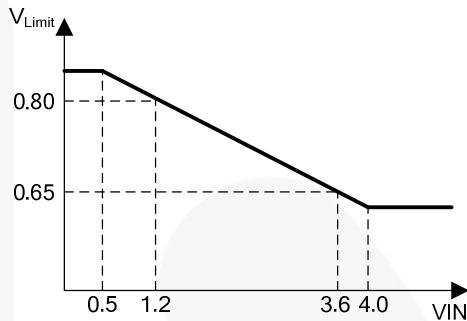

Figure 28. Constant Power Control

Latch/Auto Recovery Function

Besides the brownout protection and high/low line compensation, the FSBH0170/0270/0370 has additional protections, such as pull HIGH latch and pull LOW auto-recovery that depends on the application. As shown in Figure 29, when the V_{IN} level is higher than 4.7V, FSBH series is latched until the V_{DD} is discharged. FSBH series is auto-recovery when the V_{IN} level is lower than 0.3V.

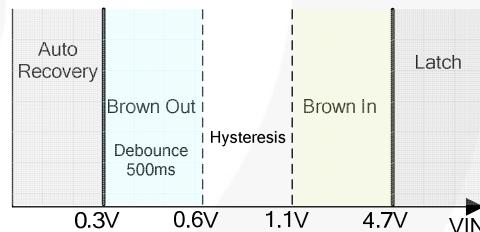

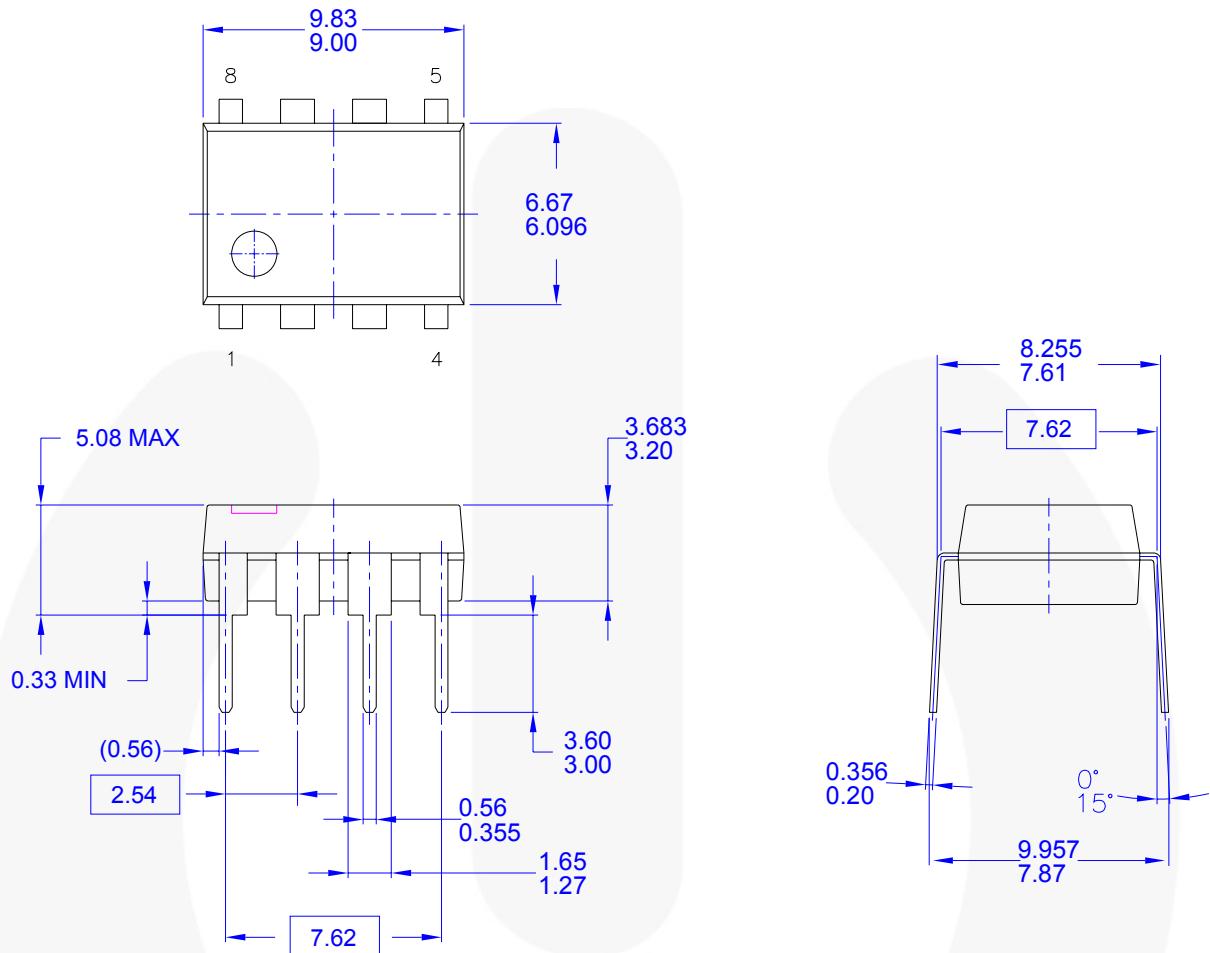

Figure 29. VIN Pin Function

Protections

The FSBH-series provides full protection functions to prevent the power supply and the load from being damaged. The protection features include:

- ***V_{DD} Over-Voltage Protection.*** The FSB Hseries is disabled whenever V_{DD} exceeds the over-voltage threshold of 28V.
- ***Open-Loop Protection.*** The FSBH series detects the feedback signal on FB pin. When over current or short circuit occurs, FB is pulled HIGH. After a 56ms debounce time, FSBH series is turned off.
- ***Over-Temperature Protection.*** The sense-FET and the control IC are integrated, making it easier to detect the temperature of the sense-FET. When the temperature exceeds approximately 142°C, thermal shutdown is activated.

Physical Dimensions

NOTES: UNLESS OTHERWISE SPECIFIED

- THIS PACKAGE CONFORMS TO JEDEC MS-001 VARIATION BA
- ALL DIMENSIONS ARE IN MILLIMETERS.
- DIMENSIONS ARE EXCLUSIVE OF BURRS, MOLD FLASH, AND TIE BAR EXTRUSIONS.
- DIMENSIONS AND TOLERANCES PER ASME Y14.5M-1994
- DRAWING FILENAME AND REVISION: MKT-N08FREV2.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
